

American Documentation Institute

Annual Review of Information Science and Technology

A NEW INTERSCIENCE SERIES

Devoted to consolidating the latest developments in the growing field of inquiry concerned with information—its generation, transformation, communication, storage, retrieval, and use.

VOLUME I is now available

About the

Annual Review of Information Science and Technology

American Documentation Institute

By the middle of 1963 there seemed little doubt that the field of information science and technology—as it is called in this volume—was becoming large and complex enough to warrant establishment of an annual review series. In the spring of 1964 this was suggested to the National Science Foundation, which joined the System Development Corporation in lending major support to the initiation of the series. The American Documentation Institute, as the professional organization most closely related to the field, accepted sponsorship of the reviews and appointed an editor and an advisory committee early in 1965.

The purpose of ADI'S Annual Review series is to provide evaluation through a comprehensive, constructive review of current topics of importance to users, designers, and students of information systems and services. Each volume consists of articles by recognized experts in the field. Keeping in mind a long-range goal of the series—to encompass the larger communication processes in which documentation plays an important role—the authors examine not only the literature dealing specifically with the information sciences but also that having to do with related aspects in psychology, sociology, communication, engineering, management, and business. The series will not merely reflect or cater to current interests; it will attempt also to broaden and deepen them.

ADI Advisory Committee for the Annual Review

*Ruth M. Davis, Chairman . . . Charles P. Bourne . . . Arthur W. Elias
. . . Robert A. Fairthorne . . . John Markus*

Volume I

*Edited by CARLOS A. CUADRA,
System Development Corporation.*

CONTENTS

Foreword, *Helen L. Brownson*

Introduction to the ADI Annual Review, *Carlos A. Cuadra*
Professional Aspects of Information Science and Technology,
Robert S. Taylor

Information Needs and Uses in Science and Technology,
Herbert Menzel

Content Analysis, Specification and Control, *Phyllis Baxendale*

File Organization and Search Techniques, *Douglas Climensson*

Automated Language Processing, *Robert F. Simmons*

Evaluation of Indexing Systems, *Charles P. Bourne*

New Hardware Developments, *Annual Review Staff*

Man-Machine Communication, *Ruth M. Davis*

Information System Applications, *Jordan Baruch*

Library Automation, *Donald V. Black and Earl Farley*

Information Centers and Services, *G. S. Simpson and Carolyn
Flanagan*

National Information Issues and Trends, *John Sherrod*

Index, *Pauline Atherton.*

1966.

352 Pages.

\$12.50.

ADI'S Annual Review will be keyed to the calendar year. The present volume covers, for the most part, literature that appeared in the calendar year 1965. Some of the earlier literature is also reviewed because this volume, as the first in the series, had no prior context to serve as a frame of reference. Volume II, which will appear in the fall of 1967, will cover 1966 literature.
